

Zoom Workplace Setup Guide

Kalyx Labs Application Integration

INTRODUCTION

To enable meeting and transcript features within the Kalyx application, Zoom must be configured correctly on your organization's account. This clean, step-by-step guide walks you through the settings required using your web browser. No technical or programming knowledge is needed.

SETUP STEPS

Step 1: Create a Zoom Account

If your organization does not have an account yet:

1. Go to `https://zoom.us`
2. Click **Sign Up** in the upper right-hand corner.
3. Fill out the registration prompts using your work email address.
4. Confirm the registration via the activation link sent to your email inbox.
5. Log back into `https://zoom.us` with your verified details.

Step 2: Purchase Zoom Workplace Pro

The integration needs cloud recording and transcript generation features, which are supported beginning on the Pro tier plan.

1. Log into your primary Zoom account portal.
2. Click into the **Plans & Pricing** directory panel.
3. Choose the **Zoom Workplace Pro** tier plan.
4. Complete the checking transaction with your business payment card method.
5. Confirm the updated status shows active on your account dashboard profile.

Feature Component	Basic (Free)	Pro Plan
Meeting Creation	Yes	Yes
Cloud Recording	No	Yes
Audio Transcripts	No	Yes
Developer APIs	No	Yes
Webhook Integrations	No	Yes

Step 3: Access the Zoom App Marketplace

The App Marketplace handles permissions connecting third-party services like Kalyx to your Zoom account configuration securely.

1. Open the marketplace link: `https://marketplace.zoom.us`
2. Log in using the exact same administration account credentials used in the prior steps.

Note: Signing in with the exact same account ensures the developer workspace matches your active Pro subscription profile features.

Step 4: Navigate to App Builder

1. Look to the top right-hand corner options bar and click **Develop**.
2. Select **Build App** from the simple drop-down menu selection.

Step 5: Create a Server-to-Server OAuth App

1. Locate the application type labeled **Server-to-Server OAuth** on the page.
2. Click the corresponding **Create** button action.
3. Provide a simple organizational name identification name. Example:
4. Click **Create** once again to generate your workspace project.

Step 6: Review Generated App Credentials

Once created, the Zoom platform will automatically generate three specific profile keys on your active window:

- Account ID
- Client ID
- Client Secret

Please keep this browser window active or save the details securely for later application.

Step 7: Complete the Information Profile

1. Click into the **Information** horizontal category step tab.
2. Provide the basic metadata elements detailed below:

Field Label	What to Fill
Company Name	Your business or corporate organization name details.
Developer Name	Name of the individual or IT staff member setting up the app.
Developer Email	A valid internal operational monitoring email address.

Click the **Continue** button step choice when complete.

Step 8: Turn On Event Subscriptions Features

1. Proceed straight forward into the **Features** tab configuration section.
2. Toggle the switch option for **Event Subscriptions** into the active position.

What are Event Subscriptions? This feature configures Zoom to quickly notify the Kalyx application via automatic background messages the moment core events (like a closed meeting or finished transcript) complete.

Step 9: Input the Integration Webhook Endpoint

1. The Kalyx engineering wing will provide you with a custom **Webhook URL** string text.
2. Paste this unique URL into the **Event notification endpoint URL** blank box area inside Zoom.
3. Click the **Validate** option link.
4. Wait for the platform confirmation text to display a clear "Validated" notice status indicator.

Step 10: Select the Required Trigger Events

1. Click the **Add Events** prompt window selection.
2. Search or select the following four target tracking events exactly:
 - `meeting.started`
 - `meeting.ended`
 - `recording.completed`
 - `recording.transcript_completed`
3. Click **Done** followed by **Save** to commit the selected events checklist.

Step 11: Set OAuth API Scopes

1. Navigate into the **Scopes** settings window tab list.
2. Click the **Add Scopes** button element.
3. Search for and select the required API items provided by your engineering team:

Scope Group	Simple Operational Definition
Meeting Scopes	Allows secure backend validation checking of meeting details.
Recording Scopes	Allows extraction access links to processing cloud recordings.
Transcript Scopes	Enables text data transfer access for generation tracking.
User Scopes	Allows standard account validation details to synchronize profiles.

Step 12: Activate the Integration Application

1. Go into the final **Activation** settings tab structure window page.
2. Review the quick summary layout outline profile details of your options.
3. Click the main **Activate** button prompt.
4. Verify that the green status label reads active as **"Activated"**.

Step 13: Securely Send Credentials

With active deployment confirmed, copy and securely share the details from Step 6 with your engineering contact:

- Account ID
- Client ID
- Client Secret

Security Warning: Never send confidential connection credentials via text-based plain email. Please pass these keys through a secure, encrypted link service (like Bitwarden, 1Password, or alternate zero-knowledge vault systems).

FREQUENTLY ASKED QUESTIONS (FAQ)

Why is Zoom Workplace Pro required?

Cloud recordings, transcript processing scripts, and modern automated webhooks are locked standard options that are only unlocked on Zoom Workplace Pro accounts or higher tiers.

Can we use a basic Zoom account?

No. Free basic profiles lack access to background data streaming triggers and data arrays, which are necessary for the integration to work.

What does the Webhook URL link do?

It acts as a private, secure pathway generated for your company to route tracking details securely back to your application environment profile without manual oversight.

If you experience issues during configuration, connect directly with your dedicated Kalyx support representative for quick technical assistance.
